

# Play Station & Toy-Cleaning Guidelines

## “One-Person Toy”

Anything is safe if it's only used by one person (with routine cleaning).  
*But check out our cleaning tips below if you're a proud slut!*

## Give It a “Time Out”

Keeping anything out of use for a certain amount of time will ensure most transmittable diseases will have died off enough to make it safe enough to share (30 days seems to be the longest life expectancy for STDs).  
*But if you're a toy slut with a high turn-over rate...*

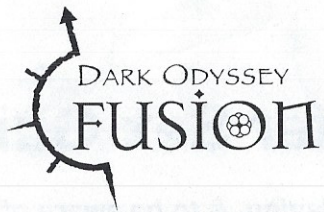

## Using Cleaning Supplies

There are many different kinds of chemicals out there for disinfecting or sterilizing toys. Below is a guide based on industry recommendation & what is most easily available to you at Dark Odyssey events. Whatever you use, be sure to wipe away any visible dirt or fluids FIRST, then apply a cleaning solution.

Whatcha Got?	What cleaning solution	How to clean it	Disinfection Rate
<b>Leather</b> Floggers, spanking benches, massage tables	10% bleach - 90% water solution, or Bleach Wipes	Apply bleach solution to the leather -- wipe, don't soak (can hurt the leather). If drawing blood, dedicate or give the toy a time out for at least 21 days.	FAIR Leather is porous - bacteria and viruses easily get absorbed and are nearly impossible to 100% remove.
<b>Plastic &amp; Plastic-Coated Wood</b> Coated canes/paddles, St. Andrew's crosses	10% bleach - 90% water solution, or Bleach Wipes	Apply bleach solution to the product, making sure it stays "wet" for 3 minutes.	EXCELLENT Plastic is very easy to disinfect!
<b>Wood without Coating</b> Paddles, canes	10% bleach - 90% water solution, or Bleach Wipes	Wipe and scrub surface with the solution. If drawing blood, dedicate or give the toy a time out for at least 30 days.	FAIR Wood is porous, so bacteria and viruses can become trapped in the wood grain.
<b>Rubber</b> Trunchcons	20-25% bleach solution or Bleach Wipes	Wet in bleach solution, then wash with soap & water to remove the bleach (minimizes damage to toy).	GOOD
<b>Glass</b> Dildos, butt plugs	Boiling water, or Bleach Solution / Wipes	Immerse in boiling water for 10 minutes or Wet in bleach solution, then wash with soap & water to remove the bleach (to minimize damage to toy & skin irritation).  Do NOT expose non-Pyrex glass to extremely hot temperatures.	EXCELLENT Glass is very easy to disinfect!
<b>Silicone</b> Dildos, butt plug	Boiling water, or Bleach Solution / Wipes	Immerse in boiling water for 10 minutes or Wet in bleach solution, then wash with soap & water to remove the bleach (to minimize damage to toy & skin irritation). Be sure that it's 100% silicone for boiling (10% silicone dildos will melt in boiling water!)	EXCELLENT Silicone is non-porous and easy to disinfect, but be careful of cracks and splits that can trap germs!
<b>Stainless Steel</b> Butt plugs, dildos	Boiling water, or Bleach Solution / Wipes	Wet in Bleach Solution, or immerse in boiling water for 10 mins. Then wipe with baby wipes or alcohol to keep from skin irritation.	EXCELLENT Steel is non-porous and easy to disinfect!
<b>Nylon &amp; Cotton</b> Clothes, rope, sheets	Change your clothes/sheets/rope, and hand or machine wash 'em.	Remove clothes/sheets/rope & toss 'em in the washing machine. Note: DO provides sheets & laundry baskets for all mattresses – please change the sheets when you finish!	GOOD

**Use condoms, dental dams, plastic wrap, & gloves on your sex toys when you can!**  
 These make cleanup faster, easier, & safer!

**Get juicy?** (for cum, squirters, blood, etc.) -- **put down chux or “puppy pads” on the equipment/floor.**  
 -- Protects the surface & makes for simple cleanup: just toss the mess in the trash!  
 -- Then wipe down the surface with a cleaning solution! This is for you, your partner, & the next person's safety!
